EMENTA E PROGRAMA DETALHADOS:

Nesta disciplina são apresentados e debatidos temas de epidemiologia e controle da leishmaniose visceral no Brasil e no mundo tais como: carga de doença, distribuição geográfica, ciclos de transmissão, parasito-vetor-hospedeiro-reservatório, determinantes socioambientais de sua distribuição, processo de urbanização, fatores de risco, princípios teóricos para o controle da leishmaniose visceral, lógica das estratégias de controle, definição de áreas de risco.
